**Subject: Testimonial Letter on the Performance of TOO De-watering Valves**

Advorio Terminal Singapore has been operating the TOO automatic bottom oily-water drainage system since 2022 on storage tanks handling diesel/gasoline/slop.

In our experience, the system has reduced manual interventions, minimized fugitive emissions at the drain point, prevented hydrocarbon carry-over to the oil-water separator (OWS), lowered maintenance needs across related equipment, and proven reliable and safe in day-to-day operations.

We are satisfied with the performance and technical support from **ECO-VALVES** and recommend this solution for the de-watering purpose of clean product storage tanks.

We look towards your continued support.

Yours faithfully,

Advorio Singapore limited

 

**Lennard Peh**
